

Edgewell Saves 400 Hours per Quarter with AuditBoard

Partnering across IT, audit, and Legal, Edgewell's IT GRC team has been able to reduce issue remediation time by 30 days and save 400 hours a quarter with automated control testing.

THE EDGEWELL STORY

Edgewell is a publicly traded consumer packaged goods company with a revenue of over \$2 billion dollars. With a portfolio of over 25 brands, Edgewell impacts the lives of consumers in more than 50 countries. Ravi Ponnaganti, Senior VP Global IT/CIO, **centralized vulnerability management** in AuditBoard's connected risk platform to **create a single source of truth**. AuditBoard has provided a single pane of glass solution where **IT stakeholders can collaborate in real time** with automated control testing and streamlined issue remediation.

AuditBoard has been a huge value-add by aligning all our teams on a centralized view of our vulnerabilities across the organization, ensuring we can identify, triage, and action the most pressing risks to keep our business growing securely.

Senior VP Global IT/CIO, Edgewell

KEY CHALLENGES

Decentralized vulnerability management

Time-intensive control testing

Difficulty scaling compliance capabilities

AUDITBOARD SOLUTION

Edgewell has built a centralized vulnerability management dashboard that drives their monthly IT Security meetings and sprints.

Key integrations allow Edgewell to automate control testing and evidence collection, streamlining compliance.

A common control library has allowed Edgewell to scale and optimize their compliance program.

RESULTS

30 Days

Issue remediation time was reduced by thirty days.

400 hours

Edgewell saved 400 hours per quarter.

Impactful Business Outcomes

Vulnerability Reporting

Decentralized vulnerability status management created issues with third-party tools. By consolidating information in an AuditBoard dashboard, Edgewell's IT GRC team can manage overall issue status and prepare for monthly management team meetings.

Issue Management

Disconnected issue management led to poor communication. The visibility provided by AuditBoard allows Edgewell to identify what is pending remediation and communicate effectively with the vulnerability management team.

Control Testing

Manual queries and personnel changes led to disjointed workflows. AuditBoard's integration capabilities allow for automatic workflows with direct line-of-sight into the results.

Why AuditBoard?

AuditBoard's connected risk platform helps teams like Edgewell manage a dynamic threat environment and automate time-intensive control testing processes to build security and drive sustainable growth. Edgewell paved the way for upleveling their control testing and vulnerability management through:

Reduced Issue Remediation Time

Edgewell aligned their first, second, and third lines of defense to their highest priority issues.

Eliminated Siloes

Edgewell's teams now partner closely to remediate issues while maintaining compliance and lowering risk exposure.

Improved Reporting

Edgewell's team can now visualize, triage, and report on vulnerabilities, allowing their IT and business teams to align on key priorities.
